

REMARKS

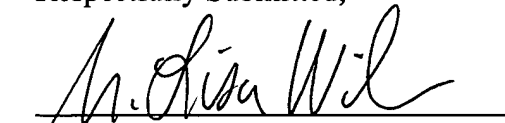

Applicants submit the above amendments to amend the specification to include the priority claim and to shorten the abstract; to replace the Sequence Listing; and to replace all previous claims (including those made under Article 34 and which are an Annex of the International Preliminary Examination Report). No new matter has been added.

With respect to the Sequence Listing, the only changes that have been made are to list the inventors as applicants in field <110>, to provide the attorney docket number for this application in field <130>, and to include the additional priority information for the international application in another set of fields <150> and <151>. Accordingly, the sequences are identical to those as filed in International Application No. PCT/AU2004/000919.

Pursuant to 37 C.F.R. §§ 1.821(f) and (g), the undersigned states that the sequence listing information recorded in the computer readable form (CRF) is identical to the paper copy of sequence listing submitted herewith. No new matter has been presented.

Accordingly, Claims 47-65 are pending and are the claims to be examined. Early examination of this application is respectfully requested.

Respectfully Submitted,

M. Lisa Wilson
Registration No. 34,045
